

## Getting started

1. Download and install xampp, open xam, start apache and mysql.
2. On xampp control panel, click 'admin', 'phpMyAdmin', create new database and name it 'client\_details', then click import, choose file from computer(file name is clients.sql)
3. After downloading the project files, open project folder(cd clientDetails) the run this command npm i or npm install
4. Run project with command (npm start)
5. Happy coding!!
